The vulnerability being addressed by the update is a memory corruption issue that could result in arbitrary code execution. Adobe Flash Player: Update Version 29.0.0.170 A: It seems that after some research and comparing the internet I am 100% sure that the issue is with your browser since no other sites had this problem, the issue seems to be resolved since a few days but I am 100% sure that this is due to you having an outdated flash player so I am recommending you to update your flash player from here: flash player for mac After the update you should have your flash player version 30.0.0.149 and this will solve the problem in your browser. I have seen a couple of other troubleshooting methods to solve the issue but we have already found the solution from the link above so I hope it helps. A: You just need to install Flash Player into Chrome browser as: In Chrome, select the menu icon on the browser toolbar (it looks like three stacked lines) and choose More Tools. Next, select Extensions. In the list of installed extensions, select the Flash Player icon, drag it to the trash bin. Now, restart Chrome. Flash Player should be installed.
